

Applications invited for Bhaskara Advanced Solar Energy (BASE) Fellowship Program

The Department of Science and Technology (DST) through its Solar Research Initiative and the Indo US Science and Technology Forum (IUSSTF) are jointly inviting applications for Bhaskara Advanced Solar Energy (BASE) Fellowship and Internship Program from Indian students and scientists to tackle the issues like climate change, clean and efficient energy and environment protection.

The objective of the BASE program is to broaden intellectual horizons by introducing top Indian students and young faculty to scientific and innovation ecosystems of leading U.S. institutions. This will help pave the way for bilateral collaborations and build long-term R&D linkages between India and the United States in the frontline area of Solar Energy.

The BASE Fellowship Program - a dynamic and transformative program was developed in 2014 to nurture future innovators and thought leaders in Solar Energy and foster contacts between students and scientists from India and the United States. The program has rapidly gained visibility in India. Each year, applications are received from a cross-section of Institutions across the length and breadth of India.

BASE Program solicits applications to undertake research internship/fellowship at U.S. Universities for a period of 3-6 months (for Interns) and 3-12 months (for Fellows).

The call is currently on with a submission deadline of 31st January 2020. More information about the program guidelines and eligibility details are available on <https://www.iusstf.org/program/bhaskara-advanced-solar-energy-fellowship> .
